## Introduction

Transmission lines have some special properties that can make them advantageous for impedance matching. First they can provide an open certain frequencies, and a short at others, making them useful for biasing, where an impedance needs to be a short at DC, but an open at a desired frequency. This property also allows them to short out harmonics of a signal, without attenuation of the desired signal. At very high frequencies ( $>2 \mathrm{GHz}$ ), the physical dimensions of inductors and capacitor make them difficult to manufacture. At these frequencies, inductors and capacitors are replaced with transmission line, made cheap and small out of PC board.

## Inputs

$\mathrm{Z}_{\mathrm{L}}:=100 \Omega$
$Z_{S}:=50 \Omega$
$S_{11 \text { max }}:=-10 \mathrm{~dB}$
$\mathrm{f}_{\mathrm{c}}:=1 \mathrm{GHz}$
$\Delta \mathrm{f}:=0.3 \mathrm{GHz}$
$\varepsilon_{\mathrm{r}}:=4.2$
$\mathrm{h}:=60 \mathrm{mil}$

Load Impedance
Source Impedance
Maximum Tolerable S11
Center Frequency
Bandwidth Needed
Relative Permittivity of LTCC
(Low Temperature Co-fired Ceramic)
PC Board Height for LTCC

## Transmission Line Synthesis Function

$$
\mathrm{W}\left(\varepsilon_{\mathrm{r}}, \mathrm{~h}, \mathrm{Z}_{0}\right):=\left\{\begin{array}{l}
\mathrm{A} \leftarrow \frac{\mathrm{Z}_{0}}{600 \mathrm{ohm}} \cdot \sqrt{\frac{\varepsilon_{\mathrm{r}}+1}{2}}+\frac{\varepsilon_{\mathrm{r}}-1}{\varepsilon_{\mathrm{r}}+1} \cdot\left(0.23+\frac{0.11}{\varepsilon_{\mathrm{r}}}\right) \\
\mathrm{B} \leftarrow \frac{377 \mathrm{ohm} \cdot \pi}{2 \cdot \mathrm{Z}_{0} \cdot \sqrt{\varepsilon_{\mathrm{r}}}} \\
\mathrm{~W}_{1} \leftarrow \frac{8 \cdot \mathrm{e}^{\mathrm{A}} \cdot \mathrm{~h}}{2 \cdot \mathrm{~A}}-2 \\
\mathrm{e}_{2} \leftarrow \frac{2 \cdot \mathrm{~h}}{\pi} \cdot\left[\mathrm{~B}-1-\ln (2 \cdot \mathrm{~B}-1)+\frac{\varepsilon_{\mathrm{r}}-1}{2 \cdot \varepsilon_{\mathrm{r}}} \cdot\left(\ln (\mathrm{~B}-1)+0.39-\frac{0.61}{\varepsilon_{\mathrm{r}}}\right)\right] \\
\mathrm{W} \leftarrow \mathrm{if}\left(\frac{\mathrm{~W}_{1}}{\mathrm{~h}}<2, \mathrm{~W}_{1}, \mathrm{if}\left(\frac{\mathrm{~W}_{2}}{\mathrm{~h}}>2, \mathrm{~W}_{2}, 0 \mathrm{~m}\right)\right) \\
\mathrm{W}
\end{array}\right.
$$

## Single Shunt Stub Transmission Line Matching

Fig. 1: Single open shunt stub matching
Here a stub and a transmission line are used to match a transmission line input, with characteristic impedance of $Z_{\mathrm{S}}$, to a complex load of impedance $\mathrm{Z}_{\mathrm{L}}$. A open circuit stub, of length 1 , is placed at the input with a transmission line connecting it to the load with a length, d . Both transmission line segments have a characteristic impedance of $\mathrm{Z}_{\mathrm{S}}$. You little (choice ot two implementions) control over the bandwidth for single stub tuners.

$$
\begin{array}{lll}
\mathrm{W}_{\mathrm{val}}:=\mathrm{W}\left(\varepsilon_{\mathrm{r}}, \mathrm{~h}, \mathrm{Z}_{\mathrm{S}}\right) & \mathrm{W}_{\mathrm{val}}=3.016 \mathrm{~mm} & \text { Width of Transmission Lines } \\
\omega_{\mathrm{c}}:=2 \cdot \pi \cdot \mathrm{f}_{\mathrm{c}} & \omega_{\mathrm{c}}=6.283 \times 10^{9} \frac{\mathrm{rad}}{\mathrm{sec}} & \text { Center Frequency } \\
\lambda:=\frac{2 \cdot \pi \cdot \mathrm{c}}{\omega_{\mathrm{c}}} & \lambda=29.9 \mathrm{~cm} & \text { Wavelength in Free Space } \\
\mathrm{R}_{\mathrm{L}}:=\operatorname{Re}\left(\mathrm{Z}_{\mathrm{L}}\right) & \mathrm{R}_{\mathrm{L}}=100 \Omega & \text { Real Part of Load Impedance } \\
\mathrm{X}_{\mathrm{L}}:=\operatorname{Im}\left(\mathrm{Z}_{\mathrm{L}}\right) & \mathrm{X}_{\mathrm{L}}=0 \Omega & \text { Imag part of Load Impedance }
\end{array}
$$

When designing transmission line transformers, there are multiple solutions to the matching problem. For an example, an additional wavelength of transmission line can be added to yield the same matching, but with a different frequency response. This is usually not done to keep the area small. Here multiple solutions are presented.

$$
\begin{aligned}
& \mathrm{t}_{1}:= \frac{\mathrm{X}_{\mathrm{L}}+\sqrt{\frac{\mathrm{R}_{\mathrm{L}}}{\mathrm{Z}_{\mathrm{S}}} \cdot\left[\left(\mathrm{Z}_{\mathrm{S}}-\mathrm{R}_{\mathrm{L}}\right)^{2}+\mathrm{X}_{\mathrm{L}}^{2}\right]}}{\mathrm{R}_{\mathrm{L}}-\mathrm{Z}_{\mathrm{S}}} \\
& \mathrm{t}_{2}:=\frac{\mathrm{X}_{\mathrm{L}}-\sqrt{\frac{\mathrm{R}_{\mathrm{L}}}{\mathrm{Z}_{\mathrm{S}}} \cdot\left[\left(\mathrm{Z}_{\mathrm{S}}-\mathrm{R}_{\mathrm{L}}\right)^{2}+\mathrm{X}_{\mathrm{L}}^{2}\right]}}{\mathrm{R}_{\mathrm{L}}-\mathrm{Z}_{\mathrm{S}}}
\end{aligned}
$$

$$
\mathrm{t}_{1}=1.414 \quad \text { Coefficient for First Solution }
$$

$$
\mathrm{t}_{2}=-1.414
$$

Coefficient for Second Solution

$$
\begin{array}{ll}
\mathrm{d}_{1}:=\lambda \cdot \frac{1}{2 \cdot \pi} \cdot \operatorname{atan}\left(\mathrm{t}_{1}\right) & \mathrm{d}_{1}=4.546 \mathrm{~cm} \\
\mathrm{~d}_{2}:=\lambda \cdot \frac{1}{2 \cdot \pi} \cdot\left(\pi+\operatorname{atan}\left(\mathrm{t}_{2}\right)\right) & \mathrm{d}_{2}=10.404 \mathrm{~cm} \\
\mathrm{~B}_{\mathrm{s} 1}:=-\frac{\mathrm{R}_{\mathrm{L}} \cdot \mathrm{t}_{1}-\left(\mathrm{Z}_{\mathrm{S}}-\mathrm{X}_{\mathrm{L}} \cdot \mathrm{t}_{1}\right) \cdot\left(\mathrm{X}_{\mathrm{L}}+\mathrm{Z}_{\mathrm{S}} \cdot \mathrm{t}_{1}\right)}{\mathrm{Z}_{\mathrm{S}} \cdot\left[\mathrm{R}_{\mathrm{L}}{ }^{2}+\left(\mathrm{X}_{\mathrm{L}}+\mathrm{Z}_{\mathrm{S}} \cdot \mathrm{t}_{1}\right)^{2}\right]} & \frac{1}{\mathrm{~B}_{\mathrm{s} 1}}=-70.711 \mathrm{ohm} \\
\mathrm{~B}_{\mathrm{s} 2}:=-\frac{\mathrm{R}_{\mathrm{L}}}{2} \cdot \mathrm{t}_{2}-\left(\mathrm{Z}_{\mathrm{S}}-\mathrm{X}_{\mathrm{L}} \cdot \mathrm{t}_{2}\right) \cdot\left(\mathrm{X}_{\mathrm{L}}+\mathrm{Z}_{\mathrm{S}} \cdot \mathrm{t}_{2}\right) \\
\mathrm{Z}_{\mathrm{S}} \cdot\left[\mathrm{R}_{\mathrm{L}}^{2}+\left(\mathrm{X}_{\mathrm{L}}+\mathrm{Z}_{\mathrm{S}} \cdot \mathrm{t}_{2}\right)^{2}\right] & \\
\mathrm{l}_{\mathrm{o} 1}:=\frac{\lambda}{2 \cdot \pi} \cdot \operatorname{atan}\left(\mathrm{~B}_{\mathrm{s}} 1 \cdot \mathrm{Z}_{\mathrm{S}}\right) & \frac{1}{\mathrm{~B}_{\mathrm{s} 2}}=70.711 \mathrm{ohm} \\
\mathrm{I}_{\mathrm{S} 1}:=\frac{-\lambda}{2 \cdot \pi} \cdot \operatorname{atan}\left(\frac{1}{\mathrm{~B}_{\mathrm{s} 1} \cdot \mathrm{Z}_{\mathrm{S}}}\right) & \mathrm{l}_{\mathrm{o} 1}=-29.289 \mathrm{~mm} \\
\mathrm{l}_{\mathrm{o} 2}:=\frac{\lambda}{2 \cdot \pi} \cdot \operatorname{atan}\left(\mathrm{~B}_{\mathrm{s} 2} \cdot \mathrm{Z}_{\mathrm{S}}\right) & \mathrm{I}_{\mathrm{s} 1}=45.461 \mathrm{~mm} \\
\mathrm{I}_{\mathrm{s} 2}:=\frac{-\lambda}{2 \cdot \pi} \cdot \operatorname{atan}\left(\frac{1}{\mathrm{~B}_{\mathrm{s} 2} \cdot \mathrm{Z}_{\mathrm{S}}}\right) & \mathrm{l}_{\mathrm{o} 2}=29.289 \mathrm{~mm} \\
\hline
\end{array}
$$

Some solutions are not valid (negative lengths), so they are dropped:
